Brain Injury Association of Massachusetts 35th Annual Conference Now Offers An Exceptional Range of Continuing Education Workshops

The Brain Injury Association of Massachusetts (BIA-MA) is proud to announce its 35th Annual Conference on Thursday, March 24, 2016 at the Best Western Royal Plaza Hotel in Marlborough, MA. The conference focuses on new developments in the brain injury field and the current challenges facing professionals, survivors and families.

This year's keynote speaker is Joanne Susi, a Certified Life Coach, Motivational Speaker, and author of her new inspirational book, "Brainstorm: From Stroke To My Trusting Place." She will be sharing her story of surviving two strokes, her success in living independently, and the importance of positive thoughts and attitudes during her recovery process.

"This conference will be our best conference yet! We are expecting over 700 attendees, 53 Exhibitors and 29 content-rich workshops on a wide variety of excellent topics, such as "Emotional Control Following ABI", "Psychopharmacology in Rehabilitation", "Functional Seating & Mobility", "Music that Makes your Brain Move and Sing", "Management of Neurobehavioral Disorders", "Employment Law", and many, many more!" says Nicole Godaire, Executive Director of BIA-MA.

Thanks to Presenting Sponsor HealthSouth Rehabilitation Hospitals, and our Partners Massachusetts Rehabilitation Commission, NeuroRestorative, Spaulding Rehabilitation Network, and Vinfen. It is also the only statewide brain injury conference geared to medical professionals, survivors and family members.

For more information on the brain injury conference, call 508-475-0032 or visit <http://www.biama.org/annualconference>.

About BIA-MA

BIA-MA, a private, non-profit organization, provides support to brain injury survivors and their families; prevention programs to educate the public on the risks and impact of brain injuries; education and training for brain injury survivors, caregivers, and professionals; and legislative advocacy for improved community services and the prevention of brain injuries.
